

Goff 10' Steel Plate Shot Blast Machine

The Goff PB6-30 Plate Blaster has six (6) 30 hp blast wheels. Three blast wheels on top and three on bottom assure 100% coverage for steel plate up to 10' wide and up to 6" thick. Shot blasting steel plate prior to welding or rolling to remove rust and mill scale provides a better surface for welding, cutting, or other processes when quality is important in industries such as Wind Turbine Tower manufacturing.
